**Notes/observations**

Silicon Carbide

Dark green, med. fine particle, Very dense powder

Volumes converted to weight. (Volume X measured bulk density = sample weight) for testing.

1a. Samples will eject from pipette into cylindrical cavity at very low, 3 - 4 psi, without blowback, aerosol, or flying dust particles.

1.b. Repeatability test performed with .125 dia pipette.

Recommend the .125 dia. pipette tip to dispensed the powder in smaller opening cavities.

Ideal material for pipette dispensing. No aerosol. Uniform particulate size.

Note: Proto cavities were not optimized for this powder. Cavities fabricated to accept approximatly a full charge of the powder @ largest sample weight.
